

Rakesh Kumar Senapati

Java Full Stack Developer

Mob- 91+ 6370340479 Email- rakeshkumarsenapati189@gmail.com

Objective

- To secure a position that offers opportunities for growth and allows me to utilize my technical expertise to contribute to the success of the organization.

Experience Summary

- 5+ years of experience as a Java Full Stack Developer in the development of web-based solutions and application development.
- Strong experience in Object-Oriented Analysis and Design.
- Good understanding of Software Development Life Cycle (SDLC) and Software Test Life Cycle (STLC).
- Extensive experience in Collections, OOPs, Exception Handling, Multithreading.
- Proficient in J2EE application model for developing web-based solutions using Spring with Spring Boot, Hibernate, Servlet, JSP, JDBC with Oracle (SQL), Microservices, RESTful Web Services.
- Solid experience with Spring Framework (Spring MVC, Spring ORM, Spring IOC, Spring-JDBC) and Spring Boot (Web MVC, ORM, Data JPA, RESTful Web Services).
- Hands-on experience with Eclipse, STS, and tools like Log4j, Maven, JUnit.
- Experience with web servers and application servers like Tomcat, WebLogic.
- Involved in technical discussions, sharing and communicating project-related ideas within the team.
- Dedicated team player with excellent organizational and interpersonal skills.
- Motivated to take independent responsibility and be a good team player with a positive attitude and adaptability to new challenges and technologies.
- Developed modular and reusable UI components using **React.js** and **functional components**.
- Implemented **React Router** for secure navigation and protected routes based on user roles.
- Developed responsive, single-page applications (SPA) using **Angular 14+**, **TypeScript**, HTML5, and CSS3.
- Configured **Angular Router** with lazy-loaded modules and route guards for secure navigation and optimized performance.

Professional Experience:

Genpact

Java Full Stack Developer

August 2021 – March 2024

Accenture

Java Full Stack Developer

March 2024 to Present

Education:

- Bachelor Of Computer Applications(BCA) from Disha College of Management & Technology Berhampur, Odisha.

Technical Skills:

- Operating System : Windows, Linux
- Programming Languages : Java 1.8, java 11, Java 17
- JSE Technology : JDBC
- Markup Languages : HTML, XML
- UI Technology : HTML,CSS,JavaScript,Angular,React.js

- Data Interchange Languages : JSON
- Restful Services : JAX-RS 2.0 (REST Easy, Jersey)
- Parsing Technologies : JAX-P, JAX-B (SAX, DOM)
- JEE Technologies : JEE, Servlet, JSP, JNDI
- Frameworks : Spring, Spring MVC, Spring Boot
- DAO Technology : Spring-JDBC, Spring Boot JDBC
- ORM Technology : Hibernate, JPA, Crud
- Database Software : Oracle10g, SQL, PostgreSQL, MongoDB
- Server : Tomcat, jetty
- Tools : Git Hub, Bitbucket
- Reporting Logging Tool : Log4J, slf4j
- Build Tools : Maven, Gradle
- IDE : Eclipse, STS
- Automation Testing Tool : Junit, Mockito
- Code Analysis Tool : SonarQube
- Project Documentation Tools : Wiki, MS-Word, MS-Excel.
- Project management Tool : JIRA
- Database Tools : SQL-developer
- REST/SOAP Testing Tools : Advanced Rest Client, Postman
- Restful documents tools : Swagger
- Messaging Tools : Kafka, ActiveMQ
- Other Tools : Docker, Jenkins, Kubernetes
- Cloud Native : AWS, Azure
- AI Tools : Git Hub, Copilot, Cursor, LLM
- Advance Language : Dsa

Summary of Projects:

Project 1 : Trade Confirmation Processing & Reconciliation System

Client: Barclays

Description:

The Trade Confirmation Processing & Reconciliation System automates JP Morgan's workflow for handling trade confirmation documents received from external brokers and counterparties. It ingests PDF, Word, and scanned files, extracts key trade details using text-extraction tools and OCR, and validates the extracted information against JP Morgan's internal trade booking system.

The system then performs reconciliation to identify mismatches in fields such as quantity, price, instrument, counterparty, and settlement date. Any discrepancies are routed to Operations through an interactive dashboard where exceptions can be reviewed, corrected, escalated, or approved. By automating ingestion, extraction, validation, reconciliation, and exception handling, the system reduces manual effort, minimizes settlement failures, and ensures compliance with global regulations including MiFID II, EMIR, Dodd-Frank, and SEBI.

Tech stack : Java 8/11,17, Spring boot, Spring security, Spring data jpa, Kafka, PostgreSQL, Junit, Docker ,Jenkins, React .

Roles and Responsibility:

- Designed and optimized database schemas for storing documents, extracted trades, validation errors, and reconciliation results; implemented indexing and partitioning strategies to improve query performance for high-volume trade data.
- Integrated React UI with backend services using Axios, adding robust error handling, loading states, and optimistic updates for a seamless operations workflow.
- Developed Spring Boot REST APIs to handle document upload, extraction results, validation responses, and reconciliation operations, ensuring secure, scalable, and low-latency communication between frontend and backend.
- Added automatic retries with exponential backoff for scenarios where the internal trade lookup service returned timeouts, 5xx errors, or temporary network failures.
- Resolved a CPU spike caused by aggressive, uncontrolled retry loops by implementing controlled exponential-backoff retries, adding retry limits, and introducing a circuit-breaker pattern to prevent retry storms and stabilize the processing pipeline.
- Implemented a high-performance caching layer to reduce repeated calls to the internal trade-booking API, resolving latency issues caused by frequent lookups and improving reconciliation throughput by caching recently accessed trade data.
- Developed modular and reusable UI components using **React.js** and **functional components**.
- Implemented **React Router** for secure navigation and protected routes based on user roles.
- Developed responsive, single-page applications (SPA) using **Angular 14+**, **TypeScript**, **HTML5**, and **CSS3**.
- Configured **Angular Router** with lazy-loaded modules and route guards for secure navigation and optimized performance.

Project 2: Personal Loan Document Verification System (PLDV)

Client: HSBC

Description:

The Personal Loan Document Verification System automates the verification of customer-submitted documents required for personal-loan disbursement in a UK bank. The system allows customers to upload identity proofs, income proofs, and bank statements, extracts key details using OCR, and validates them against predefined eligibility and compliance rules. Any mismatches or missing information are flagged for manual review through a lightweight React dashboard. By automating document ingestion, extraction, and rule-based validation, the platform reduces manual verification time and speeds up loan-processing decisions.

- **Tech Stack:** Java 8,11,17 Spring Boot, REST APIs, Spring Security, PostgreSQL, Jenkins, Docker, AWS, React, TypeScript, Angular.

Roles and Responsibility:

- Developed Spring Boot APIs for document upload, OCR extraction results, and rule-based validation workflows used during loan-processing.
- Implemented OCR-based extraction to read key fields such as name, DOB, income, and document expiry from uploaded proofs.
- Built React UI screens for document upload, verification status tracking, and error review for back-office teams.
- Integrated frontend with backend APIs using Axios with proper loading states, error handling, and validation feedback.
- Added caching for frequently accessed customer metadata to reduce repeated validation calls and improve response time.
- Implemented retry logic for external verification services (ID check / income check) to handle intermittent failures without blocking loan-processing.
- Developed modular and reusable UI components using **React.js** and **functional components**.
- Implemented **React Router** for secure navigation and protected routes based on user roles.
- Developed responsive, single-page applications (SPA) using **Angular 14+**, **TypeScript**, HTML5, and CSS3.
- Configured **Angular Router** with lazy-loaded modules and route guards for secure navigation and optimized performance.
